FORGE CARE – CYBERKINESIS LTD · INFORMATION MANAGEMENT & SAFEGUARDING CONSULTANCY

PUTTING CHILD SAFETY AND SMART INFORMATION AT THE HEART OF THERAPEUTIC CARE

Objectives

Nestled in rural Warwickshire, Forge Care provides purpose-designed therapeutic residential care for children and young people aged 6–18 who have experienced early developmental disruption (including EBD and SEMH).

Across four spacious six-bedroom homes, children find a safe, nurturing environment to heal, grow and thrive.

CyberKinesis supported the early stages of Forge Care's journey to award-winning services, helping them to:

- Create an Information Management Strategy mapping child, accommodation and staffing data.
- Digitise daily health & safety checks across all accommodation areas.
- Safeguard children online through sophisticated web filtering and content control.

Challenges

A large, multi-home site with child safety at the forefront demanded rigorous, reliable information storage and retrieval — and safeguarding built into every device and daily routine. Child protection principles had to underpin everything, supporting Forge Care's objectives without adding burden to busy care staff.

Solutions

CyberKinesis delivered a focused, high-impact engagement centred on safety and information. We deployed **web-filtering routers** with age-related profiles to keep children safe across the site, and developed an **Information Management Strategy** — with pre-defined naming conventions — so vital records could be stored and retrieved with ease. To make that information work day-to-day, we built a **PowerApp** giving staff fast access to records and key decision-making data. Finally, we digitised **daily health & safety check sheets** using **CyberKinesis Kinetic Apps & Workflows**, with a **Power BI dashboard** providing real-time analytics that instantly flag any area not checked within its required timeframe

BENEFITS

Children Safer Online

Web-filtering routers with age-related profiles block harmful content across every home, site-wide.

Information at Their Fingertips

A bespoke PowerApp and clear naming conventions put vital child, staffing and accommodation records instantly within reach.

Nothing Slips Through

H&S checks via Kinetic Forms feed a live Power BI dashboard that flags any missed check in real time.

A Strategy Built to Scale

An Information Management Strategy gave Forge Care solid digital foundations to support their award-winning growth.

"CyberKinesis gave us the digital foundations to keep our children safe and our information organised. In a short, focused engagement they delivered real, practical tools we still rely on every day."
